

Building ToDo app JSTL

JSTL

Add dependency in pom.xml to support JSTL tags in your application

```
<dependency>
    <groupId>jstl</groupId>
    <artifactId>jstl</artifactId>
    <version>1.2</version>
</dependency>
```

list-todos.jsp

<%@ taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c"%>

```
<html>
    <head>
        <title>Todo's for ${name}</title>
    </head>

    <body>
        <H1>Your Todos</H1>
        <table>
            <caption>Your Todos are</caption>
            <thead>
                <tr>
                    <th>Description</th>
                    <th>Target Date</th>
                    <th>Is it Done ?</th>
                </tr>
            </thead>
            <tbody>
                JSTL For Loop
                <c:forEach items="${todos}" var = "todo">
                    <tr>
                        <td>${todo.desc}</td>
                        <td>${todo.targetDate}</td>
                        <td>${todo.done}</td>
                    </tr>
                </c:forEach>
            </tbody>
        </table>
        <br>
        <a href = "add-todo">Add a Todo</a>
    </body>
</html>
```
